

Endpoint Cloud Backup (Files and Image)

Thin client based managed backup and recovery for businesses of all sizes

IDrive® 360 is a managed endpoint backup platform for organizations that need a single-point solution for all their cloud backup, and data recovery needs. Deploy the non-intrusive thin client software on hundreds of endpoints in one go.

Perform backup and restore, manage users, via centralized console, create unlimited units, delegate unit administration to users, and remotely supervise all units and users.

Basic Plan

\$29.50

per computer / year

2 TB storage per computer license

Unlimited users

Features for effective disaster recovery

Endpoint Device Backup

A secure endpoint cloud backup solution that allows businesses to schedule and automate backup of the endpoint devices across their organization through a unified web console.

Image Backup New

Perform cloud-based image backup for your entire Windows computers and server operating systems along with the virtual machines associated with them.

Centralized Management

Create role-based user accounts. Users with admin rights can access both backup and management consoles. Backup managers can only access the backup console.

Encrypted Cloud Storage

IDrive® 360 uses SSL protocols to secure all communications. AES 256-bit encryption protects data on transfer and storage.

Mass Deployment

Remotely install the IDrive® 360 application on multiple PCs and Macs in one go using Group Policy Object (GPO).

File-level Recovery

Restore critical files instantly from the cloud during disasters and hardware failures with an almost real-time objective, without impacting daily operations.

Point-in-time Restore

IDrive® 360 supports snapshots-based recovery of the latest 30 versions. Data is always protected against malware and corruption at all times.

System Image Recovery

Restore your Windows computers and server systems from the backed-up image data, without requiring operating system installation.
