

Data security is of utmost importance as it is the lifeline of any organization and critical for maintaining business continuity. Backing up all of your organization's data is a big job. The risk of losing data on any device can mean disaster for your business. From backing up your servers to making your data accessible across a network of computers, smartphones and tablets, IDrive eases enterprise-level backup from beginning to endpoint. IDrive is an online backup service that supports backup from multiple PCs, Macs, servers, Android, and iOS devices to a single cloud account. Online backup is easy and takes less time to configure. Once backed up, you can securely access all your files from anywhere.

Why IDrive for your enterprise?

- Backup multiple devices into a single account
- Backup support for desktops, laptops, mobiles, and servers
- Hybrid backup secures files to local drives for faster restore
- Deploy thin client with minimal GUI and manage via web
- Manage backups of all your remote computers via web based console
- Create multiple accounts using your storage space
- Robust management console and reporting tools
- Restore multiple file versions of backed up files
- Easy installation and setup - takes only seconds
- Business compliance assistance- HIPAA, SOX, GLBA, SEC/FINRA

End-to-end data protection

Multiple Device Backup

Protect all your PCs, Macs, iPhones, iPads, and Android devices into a single account!

Server Backup

Backup your SQL, Exchange, Hyper-V, Office 365 Mailbox, VMware, MS SharePoint, Oracle and Linux servers with zero downtime!

Enterprise Grade Security

Data is encrypted using 256-bit AES encryption during transfer and storage. On signup, you can choose a private encryption key (known only to you), to maintain utmost data confidentiality.

Compliance

IDrive assists small and emerging businesses within the medical, accounting, financial, and legal professions to comply with legal and federal regulations like HIPAA, SOX, GLBA, SEC/FINRA.

IDrive Express™

Backup or retrieve data, within a week, using physical shipment of temporary storage devices.

Data Center Backup

IDrive makes it easy for enterprises to connect to their local and remote Linux servers, and back them up using a secure browser-based solution.

Hybrid Backup

Local backup is a complementary solution to online backup. Online backup lets you access data from anywhere, whereas local backup allows faster backups and restores.

Single Sign-On (SSO)

Admin of Enterprise accounts can use any IdP of their choice to process all user authentications. This allows users to login to multiple systems with just one set of credentials.

IDrive® Thin Client

Deploy the thin client application that has limited GUI, on your computers and perform backup, restore or manage settings, via the Dashboard.

Explore the Dashboard

Manage backups of all your remote computers with robust reporting tools with near real-time response from the centralized console.

Users/Groups

Admin can create multiple users, assign them admin control and organize them into groups. Using Dashboard, Admin can manage and propagate settings for users or groups.

Settings

Admin can propagate settings for all connected devices in one go and lock particular settings for a user or group of users. Admin can also create policies with required settings and propagate them for connected groups.

Computers

Through the 'Computers' tab view all the devices attached to your account in one screen. Remotely manage your computer settings, backup set and schedule.

Legal Hold

Legal hold is a process which allows the admin to block a user account. The user will not be able to access his account, but Admin can actively access the account and download data.
